PROFESSIONAL SUMMARY

B.Sc.Data Science & Analytics student (2023–2026) with hands-on experience building AI-powered full-stack web applications, applying machine learning models, and delivering data-driven insights. Proficient in Python, SQL, Flask, and Scikit-learn. Skilled in processing real-world datasets, integrating NLP APIs, and automating reporting pipelines. Seeking an entry-level Data Analyst or Software Engineer role.

EDUCATION

B.Sc. Data Science & Analytics

2023 – 2026

Sree Saraswathi Thyagaraja College, Pollachi, Tamil Nadu

2020 – 2023

HSC (12th Grade) | SSLC(10thGrade)

RVG Hr. Sec. School, Kurichikottai

WORK EXPERIENCE

Data Analyst Intern – LITZ Tech

July 2025

Tools: Python, Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, Tkinter

- Cleaned and preprocessed real-world student attendance datasets (~1,000+ records) using Python & Pandas, resolving missing values and standardizing formats to ensure 95%+ data integrity.
- Built interactive visualizations (bar charts, heatmaps) using Matplotlib & Seaborn to surface attendance trends, enabling faculty to identify 3 high-risk departments at a glance.
- Trained a Linear Regression model using Scikit-learn to predict at-risk students with 85%+ accuracy, providing early intervention signals for data-driven academic decisions.

PROJECTS

DataScan AI – AI-Powered Data Intelligence Platform

2025 – 2026

Tech Stack: Python, Flask, Scikit-learn, Groq LLaMA 3.1 70B API, Matplotlib, Seaborn, ReportLab, SQLite

- Designed and developed a full-stack Flask web app enabling users to upload CSV/Excel files and receive automated AI-driven analysis, reducing manual EDA effort by 70%.
- Integrated 3 ML model types (classification, regression, clustering) via Scikit-learn with auto-selection logic, making the platform accessible with zero ML expertise.
- Built an NLP chatbot using Groq's LLaMA 3.1 70B API with 20+ intent categories to answer data queries conversationally, increasing user engagement with the analysis pipeline.
- Implemented automated chart generation and PDF report export via ReportLab with session-based authentication (SQLite), delivering production-ready shareable reports.

Student Attendance Analyzer – Python Desktop App

2024 – 2025

Tech Stack: Python, Pandas, Matplotlib, Seaborn, Scikit-learn, Tkinter

- Cleaned and analyzed attendance records for 500+ students across multiple departments using Pandas, identifying data inconsistencies and normalizing entries for accurate reporting.
- Visualized department-wise trends using Matplotlib/Seaborn dashboards, pinpointing 3 departments with chronic attendance below 75%, enabling targeted faculty intervention.
- Built a regression model achieving 85%+ predictive accuracy to identify students at academic risk, supporting proactive counseling decisions.

TECHNICAL SKILLS

Languages: Python, SQL

Data Analysis: Pandas, NumPy, EDA, Statistical Analysis

Machine Learning: Scikit-learn, Predictive Modeling, NLP

Visualization: Power BI, Tableau, Matplotlib, Seaborn, Microsoft Excel

Web / Backend: Flask, SQLite | Database: MySQL, MongoDB

Tools & Cloud: GitHub, Jupyter Notebook, Groq API, AWS (Basics), Cloud Computing Fundamentals

CERTIFICATIONS & LANGUAGES

MongoDB (MongoDB University) | NPTEL: Machine Learning | NPTEL: Software Testing | Infosys: AI & MapReduce | AWS Cloud Workshop | Udemy: Web Analytics & Cloud Computing | Languages: Tamil (Native) | Telugu (Native) | English (Professional)
